eCASE 11.0.4 Release Notes

Bug Fixes

We've addressed the following issue in eCASE 11.0.4:

ID	Description
48754	Addressed bug preventing hyperlinks in the Procedure text editor from opening in a new tab when the "Open in a new tab" option was checked. Procedure text links will now open in another tab when this option is selected.
48904	Fixed a reported issue where PDF files were corrupted within the Online Editor, preventing the PDF from being opened in either the Online Editor or using Acrobat.
48908	Addressed a bug in which customized headers added to the LTViewer.aspx page were hidden by other page elements. We've corrected this issue and headers are no longer blocked.
49785	When an application URL was configured to "https", users were receiving a Contact Admin error message during attempts to open a folder configured with web services. Web services now work with application URLs configured to "https".
49899	Corrected a bug causing users to receive timeout alerts and get logged out of the application when attempting to upload large attachments.
