## 1.1  Request For Documents Task Assignment Workflow Updates

*ID# 101138*

We have updated the functionality behind Request for Documents task assignment to prevent Collaboration Portal tasks from getting lost in certain scenarios when users are added, changed, or removed. The following updates have been made:

- Request for Documents task assignments are established for the Program Office (PO) so Collaboration Portal users can see all tasks assigned for the PO.
- Once a user is removed from a PO, they can no longer access tasks associated with that PO.
- If a user is removed from one PO and added to another, they can only access tasks associated with their new PO. They cannot access tasks from the previous PO.
- If a new user is added to a PO, they can access all existing tasks associated with that PO.
- A prompt appears when users associated with a Program Office (PO) are inactivated.

## 1.2  Label Change: Correspondence Letter Insert Field

*ID# 101142*

The label on the "# Total Pages" Correspondence Letter Insert field has been changed to "# of Total Pages Released" for clarity. The query for generating the count has also been updated to correctly counts the number of pages released in document delivery for the associated request.

**Note: Documents must be delivered before using the insert field in a Correspondence Letter to generate the correct count.**

# 2  Bug Fixes

We've addressed the following bugs in this version of FOIAXpress:

| ID | Description |
| --- | --- |
| 99561 | Resolved a bug in PAL causing acknolwedgement emails to be sent to requesters incorrectly when the "Show in PAL" option is unselected. |
| 100333 | Addressed a vulnerability where CAPTCHA could be bypassed in the password reset flow. |
| 100786, 101471 | Corrected a bug in the Collaboration Portal preventing new tasks from appearing on the homepage dashboard. |
| 101486 | Fixed a workflow issue in which Request for Document tasks could not be sent to Program Offices without active user email addresses. |
| 101611 | Addressed a bug where page rotation image operations conducted in the Collaboration Portal Document Review Module were incorrectly applied twice when sent back to FOIAXpress. |
| 101613 | Fixed an issue impacting correct counts in the drill down view of Dashboard widgets. |
