eCase Audit 5.1.0 Release Notes

New Features

The following new features were added to the latest eCase Audit release:

ID	Feature	Description
22007	Change/Add Permissions for Milestone Configuration Settings	Three new configuration options are now included in the milestone configuration settings section: • Who can update planned milestone dates • Who can update revised milestone dates • Who can update actual milestone dates This means users can now control which staff tab role(s) will be able to independently edit Planned, Revised, and Actual Dates. In addition, the "Who can update milestone dates" option now only controls a user's ability to edit the milestone profile (name/order), and move a milestone up or down.
24487	Custom System Account Name	Added the ability (via SQL query) to customize the username that appears in emails received from the system account (this is "System Account" by default).
