v4.9.0

March 2023

eCase Investigations 4.9.0 Release Notes

New Features

The following new features were added to eCase Investigations 4.9.0:

ID	Feature	Description
21144	Training: Set Requirements on Submit Course Form	The form fields on the Submit Course form can now be set as required, which ensures these fields are filled in before the form is submitted. If a field is marked as required on this form, the user will not be able to submit the form until that field is complete. Required fields are highlighted in red, and users are notified if any required fields are not completed when attempting to submit the form.
21329	Training: Include Hours in My Training List	In the Training module, when users submit courses the quantity of hours entered for the course is now listed as a column in the My Training List view, allowing users to see the number of hours associated with each course within this view.
21333	Restrict Actions on Suspended/Aborted Cases	The system no longer allows users to take workflow or case conversion actions when a case is in Suspended or Aborted status. If users attempt to take action of a case in one of these statuses, the action is rejected, and a system message displays, informing the user that the attempted action is not allowed on suspended or aborted cases.
21350	Added Document Approvals to Approvals Tab	Any pending Document Approvals will always appear under the Document Approvals section on the Approvals tab.

ID	Feature	Description
21480	Read-Only Permissions for Chron Logs and Techniques	Revised role permissions to allow Administrators to apply read-only permissions on Chron Logs and Techniques.
21570	Index Import Duplicate Notification	When importing indexes, if the “Create a new Index if there is a match” flag is set to “Yes,” a notification is sent after the import if any duplicates were created during the import process.
22080	Required Contact Information Fields Highlighted	In the Contact Information fields, all required fields are not highlighted in red to easily identify the information that must be provided before the form can be submitted.

Bug Fixes

The following bug fixes were applied in Investigations 4.9.0:

ID	Description
20769	Fixed an issue where changes made on the Close tab were not saved when using the standard Save function. All changes are now retained after saving on this tab.
21613	When a case import is completed, the notification sent to the configured email address now includes the associated case number to easily identify the impacted case.
21799	Fixed an issue where the Document Report display index value displayed as empty. This value now correctly shows the Display Index from the case’s Attachments tab.
